Urban Trees

Many cities are planting more trees along streets and around public buildings. Trees provide shade and release water vapor, which can lower local temperatures. Tree roots can also absorb rainwater and reduce pressure on drainage systems. In practical terms, cooler streets and better storm-water management. However, young trees require regular care, and a single tree species can be vulnerable to disease. This limitation is important because successful tree programs depend on maintenance as well as planting. For that reason, urban planners increasingly favor diverse species and long-term maintenance rather than simply planting the largest possible number of trees.
