**Electric Buses**

Many cities are replacing some diesel buses with electric models. One important reason is that electric buses produce no exhaust from the vehicle itself and can be quieter on urban streets. In addition, their environmental impact still depends partly on how the electricity used for charging is generated. Researchers therefore note that electric buses offer local advantages but require planning and suitable energy systems. Nevertheless, batteries add cost and weight, and routes must be planned around charging needs. The issue is not simply whether the approach has value, but under which conditions it works best. In particular, electric buses still have environmental and operational considerations. For this reason, as battery technology improves, transport agencies are learning which routes are best suited for early adoption.
