Museum Lighting

Museums must balance visibility with the need to protect sensitive objects. One important reason is that strong light helps visitors see details but can gradually damage paper, textiles, and some pigments. In addition, curators may limit brightness, rotate delicate objects, or display them for shorter periods. Researchers therefore note that museums manage light to protect objects without making them impossible to see. Nevertheless, modern sensors can adjust lighting according to whether visitors are present. The issue is not simply whether the approach has value, but under which conditions it works best. In particular, some objects may be displayed only for limited periods because of light damage. For this reason, these measures allow museums to reduce unnecessary exposure while maintaining a useful viewing experience.

9. What is the main purpose of the passage?

- A. argue that museum lighting should be avoided in every situation
- B. describe only the historical origins of museum lighting
- C. Explain the trade-off museums face when lighting sensitive objects
