Food Waste Tracking

Restaurants often know how much food they buy but not exactly how much they throw away. One important reason is that some kitchens now weigh discarded food and record why it was wasted. In addition, the data can reveal whether waste comes mainly from preparation, oversized portions, or unsold meals. Researchers therefore note that measuring food waste can guide practical changes in restaurant operations. Nevertheless, tracking itself does not reduce waste unless managers use the information to change purchasing and kitchen practices. The issue is not simply whether the approach has value, but under which conditions it works best. In particular, data collection is useful only when it leads to decisions. For this reason, even simple records can be useful when they are collected consistently over time.

9. What is the main purpose of the passage?

- A. Explain how tracking can help restaurants reduce food waste
- B. describe only the historical origins of food waste tracking
- C. compare two unrelated technologies without reaching a conclusion
- D. argue that food waste tracking should be avoided in every situation
