Urban Beekeeping

Beehives are increasingly kept on rooftops and in community gardens. One important reason is that cities can provide a surprising variety of flowering plants across parks, balconies, and private gardens. In addition, however, adding too many managed honeybee colonies may increase competition for food with wild pollinators. Researchers therefore note that urban beekeeping has benefits but may affect other pollinators. Nevertheless, researchers therefore recommend considering local flower availability and native species before expanding hive numbers. The issue is not simply whether the approach has value, but under which conditions it works best. In particular, more hives are not always better for the local ecosystem. For this reason, urban beekeeping can be educational and productive, but it should be planned within the wider urban ecosystem.

9. What is the main purpose of the passage?

- A. argue that urban beekeeping should be avoided in every situation
- B. describe only the historical origins of urban beekeeping
- C. compare two unrelated technologies without reaching a conclusion
- D. Present both benefits and ecological concerns related to urban beekeeping
