SECTION 3 - Reading Comprehension

5 questions | 15 minutes

Desalination

Desalination plants produce fresh water by removing salt from seawater or brackish water. This development is often justified by the fact that modern reverse-osmosis systems force water through membranes that block many dissolved salts; moreover, the process can provide a reliable source of water in dry regions but requires significant energy. Taken together, these points suggest that desalination can increase water supply but has energy and environmental costs. Yet the apparent advantages should not be treated as automatic, because plants must also manage concentrated salty waste water in ways that limit environmental harm. A careful interpretation therefore requires attention to the conditions under which the method is used. In particular, desalination is useful but not environmentally cost-free. Consequently, improvements in membranes and energy recovery have reduced costs over time.

9. What is the main purpose of the passage?

- A. Describe how desalination helps water supply and what challenges it creates
- B. compare two unrelated technologies without reaching a conclusion
- C. describe only the historical origins of desalination
- D. argue that desalination should be avoided in every situation

10. According to the passage, which statement is true?

- A. Desalination can increase water supply but has energy and environmental costs.
- B. The approach described is useful only in laboratory settings.
- C. The main benefit described in the passage has been completely disproved.
- D. The passage states that no practical limitations have been identified.

11. The word **concentrated** is closest in meaning to:

- A. unrelated to the subject
- B. changing without any pattern
- C. impossible to measure
- D. Containing a large amount of a substance in a small volume

12. Which of the following can be inferred from the passage?

- A. Further planning or evaluation is unnecessary once the approach is adopted.
- B. The author believes that one simple action can solve every related problem.
- C. The approach described has no costs or disadvantages.
- D. Desalination is useful but not environmentally cost-free.

13. Which statement best reflects the author's view?

- A. The subject has potential benefits, but its success depends on how it is implemented.
- B. The subject has already solved all of the problems discussed.
- C. The subject is entirely ineffective and should be abandoned.
- D. The subject is useful only because it is inexpensive.

SECTION 4 - Restatements

3 questions | 6 minutes
